

OVERVIEW. The Orange County industrial market remains constrained by the lack of availability of quality space. Asking lease rates and sales prices both moved up sharply in Q2. Construction moved up slightly, but falls well short of where it needs to be to satisfy the demand for quality industrial space. Net absorption remained in positive territory, but suffered a decline. Vacancy fell to another new low. However, while all key metrics point to a market as tight as ever, anecdotal information indicates a slowdown in the owner/user sale market due to high pricing combined with higher interest rates brought on by the Federal Reserve’s response to runaway inflation. Early indications of a slowdown in the leasing market may also be at hand, as business owners grapple with the higher cost of rent, labor, raw materials, and transportation.

VACANCY & AVAILABILITY. The overall vacancy rate in Orange County fell again in Q2. This time it was a 5-basis point drop to 1.23%, another all-time low. But, as we have been reporting, many cities have vacancy rates even lower than that. In fact, Aliso Viejo, Foothill Ranch, Laguna Beach, Laguna Niguel, La Palma, and Seal Beach don’t have a vacancy rate because not a single square foot is available there. Anaheim, the city with the largest existing inventory, has a current vacancy rate of just 0.59%, down from 0.86% in Q1. The availability rate, which includes space offered for lease or sale that is still occupied, stands at 2.4%.

LEASE RATES & SALES PRICES. The average asking lease rate jumped another \$0.09 to \$1.34 in Q2 after a \$0.07 increase in Q1. Year over year, asking rents have increased by over 20%, but since many buildings have been marketed and leased without an asking rate, the actual rate is somewhat higher. Landlords are still holding the line on offering free rent or tenant improvement contributions. Fixed annual rental increases are also moving up. It is now common to see landlords insist on increases of 4% per year, rather than 3%, which has been the standard for many years. We are now even seeing a return to rent increases based on the CPI in response to rampant inflation.

The average asking sales price broke the \$300-per-square-foot barrier almost a year ago, and has continued to rise quickly from there. In Q2, the average per-square-foot sales price topped \$366. Actual prices are higher, as prices are bid up above asking, and off-market deals, which have become more prevalent, are often initiated with unsolicited offers to property owners.

TRANSACTION ACTIVITY. Lease and sale activity, both in terms of square footage and number of transactions, fell for the fourth quarter in a row, not unexpected given the shortage of space available for lease or sale. Some buyers in the market are giving up on their searches and are opting to renew existing leases, more so now since the interest rates on SBA mortgages have spiked. Only 2.7 MSF of deals were inked in Q2, down from 3.9 MSF in Q1 and 6 MSF in Q2 of last year. In all, 212 transactions were completed in Q2; 155 leases and 57 sales, as compared to a total of 199 leases and 60 sales in Q1.

Gross Absorption	▼ DOWN	1,801,590	2,417,864	2,534,508	(28.92%)
Net Absorption	▲ POSITIVE	407,952	1,090,457	876,591	N/A

ABSORPTION. In Q2, net absorption remained in positive territory, but fell by more than half to 407,952 SF. The largest move-in for the period was a 148,000 SF lease to McKesson at 1930 Malvern Street in Fullerton. In the only other move-in over 100,000 SF, Atlas International, Inc. took occupancy of a 101,000 SF building on West McFadden in Huntington Beach. Under current circumstances, net absorption is being held back by lack of supply rather than a lack of demand. Also, in times of low vacancy, there is a disproportionate amount of functionally obsolete space in the available inventory, as quality product gets snapped up immediately.

CONSTRUCTION. Unfortunately, little changed on the construction front in Q2. Just 2,620,833 SF of space is in the queue, with most of that total in the Goodman Logistics Center on Orangethorpe Avenue in Fullerton. When completed, the four-building logistics campus will add 1,536,055 SF of first-generation space to North County’s inventory of relatively older properties. Huntington Gateway Business Park in Huntington Beach (the former Boeing site) is the other major project currently under construction. The project, owned by Sares-Regis, includes a build-to-suit of 433,865 SF for Cambo Manufacturing, and another spec building of 244,705 SF. Another 2.2 MSF of space is in the planning stages, most of which will be built in the North County submarket.

EMPLOYMENT. The unemployment rate in Orange County was 2.4 % in May 2022, down from a revised 2.7% in April 2022, and below the year-ago estimate of 6.2%. Between May 2021 and May 2022, total nonfarm employment increased by 76,100 jobs, or 4.8%.

Forecast

While the statistics will continue to indicate tight market conditions going forward, the upward trajectory we have seen in sales prices and lease rates is showing signs of slowing. The cost of doing business has increased sharply due to an inflationary spiral that started last year. Many owner/user buyers, already faced with rapidly rising operating expenses across the board, are giving up on their acquisition plans due to the combination of high prices and rising borrowing cost. The interest rate for an SBA 504 loan, the most popular financing vehicle for owner/user purchases, has risen by 63% to 5.19% in just the past five months. Further increases are expected as the Fed continues to raise its benchmark rate. It is too early to say if the market will move into correction territory, but for the first time in years there appears to be a shift in market momentum. We expect to see more supply hit the market for sale in the second half of the year, as those owners who have been contemplating a near-term sale accelerate their exit strategies. Time on market will likely increase and fewer buyers will be competing for deals.

As the second quarter of 2022 comes to a close, we are starting to see the country as a whole react to the measures being taken to combat uncomfortably high inflation. The United States economy is grappling with a four-decade-high inflation rate of 8.6%, the Federal Reserve’s aggressive interest rate hikes, supply constraints, an energy crisis, a bearish stock market, and even a war overseas. Despite all these factors, demand for industrial buildings in Orange County is still running ahead of supply, but that may be about to change.

Sale demand is still running well ahead of limited supply throughout Orange County, but that balance is being threatened by higher interest rates. The SBA 504 mortgage rate has increased by more than 60% since January, to 5.19%. As the Federal Reserve continues its push to curb runaway inflation, history tells us we will see rates move high enough to tip the scales in the other direction. Signs of a slowdown in sales have yet to manifest in our quarterly statistics, but we are seeing potential owner/users and institutional investors exercising more caution. The sale market is of course quite interest-rate sensitive, so it is hard to imagine that demand won’t be affected by higher rates.

The inflationary environment we are currently experiencing has had a direct influence on all of us, including every Orange County business owner who is facing sky-high rents, record-breaking fuel costs and a big increase in wages, among other things. To what degree the recent spike in rents will impact demand for space going forward is still a big unknown. But, we are already seeing a falloff in active requirements, an increase in time-on-market and a decrease in competition for space. That could be good news for those in the market for space in the coming months. Finally, they may have some viable quality options to consider.

So, if you are making a real estate decision in the near future, it is important to consider the foregoing carefully. The market is showing signs of reaching its peak, yet we do not know if or when the market will correct, and how severe a correction would be should one occur. Sale and lease comps still show the market on the same trajectory it has been on for years. However, comps look backward. They tell us where we’ve been. It’s the psychology of the market that we see changing, and that tells us more about where we are going because thoughts and feelings precede action. There’s never been a better time to be fully informed than now.
